Course Title:

Health Systems Management

Health Systems Analysis is the application of the systems approach in health. It is an approach to examine all aspects of the health system in a systematic and organized way to find out its strengths and weaknesses and identify priority areas for action.

Learning Goal:

To enhance the participants' comprehension of the basic concepts of the health system and to recognize the importance of a well functioning health system in achieving better outcomes. The learning goal will be achieved through a rapid review of the health system and by condensing the findings in an appropriate report.

Learning Objectives:

At the end of the course, the participants shall be able to:

1. comprehend the basic concepts of health systems
2. be able to categorize and classify health systems into various components
3. understand the development of instruments for a rapid assessment
4. develop relevant indicators for the exercise
5. understand the conduction of a health systems analysis in the field
6. analyze and interpret the data collected into a comprehensible report

Approach: This course shall be based on hands-on approach, supplemented by discussions, interactive didactic sessions and group work. The learning process will be primarily learning by doing and the participants are expected to be pro-active during the course. The participants are expected to make minimally one presentation each during the duration of the course. The class shall be divided into groups at the start of the course and these groups shall participate in group work and field visits. There will be two field visits to RHC/BHU level, health care facilities for each group. The groups shall summarize their experiences in the form of a condensed report and are also expected to make a presentation highlighting the findings from the field visit.

Teaching Methodology:

Lectures, discussions, group work, presentations, and assignments and supervised field trips.

Participant Fee:

Rs: 5,000
