3 Days Program

Quality Assurance & Management for Healthcare Facility

COURSE DESCRIPTION

The Quality Assurance techniques will help you maintain high levels of quality at minimum cost. This quality assurance will refer to identification, assessment, correction and monitoring of important aspects of patient care designed to enhance the quality of health management services with achievable goals and within available resources. You can save millions by reducing rejection, rework and scrap. Improved quality means reduced costs, but this cannot be achieved without the use of proper Quality Assurance technology and without bringing it down to the worker / operator level. The basic philosophy of this course is to help to the processes and methods used to prevent mistakes and defect the manufactured mistakes, detection of defects to prevention of defects and make their workers responsible for quality. The course is tailor made to a highly simplified form so that the managers can learn and pass on the technology to their workers / operators for gaining real advantage.

COURSE CONTENTS

- The latest trends and the new definition of Quality
